PROFESSIONAL SUMMARY

Analytical and detail-oriented Computer Science Engineering student specializing in Health Informatics with hands-on experience in **data analysis, SQL, Python, Excel, Power BI, and data visualization**. Skilled in **data cleaning, data preprocessing, exploratory data analysis (EDA), statistical analysis, relational databases, dashboard development, and reporting**. Proficient in **Python, Pandas, NumPy, SQL, Advanced Excel, Power BI, Tableau, and Matplotlib**, with a strong foundation in machine learning and analytical problem solving. Seeking a **Data Analyst / Data Analyst Intern** opportunity to transform data into actionable insights and support data-driven decision making.

TECHNICAL SKILLS

Data Analysis	Python, SQL, Advanced Excel, Pandas, NumPy, Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA), Data Transformation
Data Visualization	Power BI, Tableau, Matplotlib, Dashboard Development, Data Visualization, Reporting, KPI Analysis
Databases	SQL, MySQL, Relational Databases, Database Design, Data Querying, Data Management
Statistics & ML	Statistical Analysis, Classification, Clustering, K-Means, K-Medoids, PCA, Model Evaluation, ROC Curves, Precision, Recall, F1-Score
Programming & Tools	Python, Java, Git, GitHub, VS Code, Google Colab

EDUCATION

VIT Bhopal University Bhopal, India
B.Tech in Computer Science Engineering – Health Informatics — CGPA: 8.5/10 *2023 – 2027*

DATA ANALYSIS & TECHNICAL PROJECTS

Malaria Detection System *Python, Pandas, NumPy, Scikit-learn, Matplotlib*

- Performed **data cleaning, preprocessing, and feature preparation** on medical image datasets using Python, Pandas, and NumPy for predictive analysis.
- Conducted **exploratory data analysis (EDA)** to examine dataset characteristics, class distributions, and patterns, and created visualizations using Matplotlib.
- Applied **Principal Component Analysis (PCA)** for dimensionality reduction and feature transformation to support efficient machine learning analysis.
- Built and evaluated supervised classification models using **precision, recall, F1-score, and ROC curves** to assess model performance.

Hospital Management System *Java, SQL, Object-Oriented Programming*

- Designed a centralized **relational database system** to manage patient records, appointment scheduling, billing, and hospital operational workflows.
- Implemented **SQL queries** for structured data storage, retrieval, filtering, and management of operational records.
- Applied relational database concepts to organize healthcare data and support efficient **data querying, accessibility, and management**.

RESEARCH EXPERIENCE

Malaria Detection by the Use of Machine Learning and Deep Learning *IEEE Research Paper – 2025 Co-author*

- Developed **data preprocessing and feature extraction pipelines** using Pandas and NumPy to prepare medical image datasets for predictive modeling.
- Analyzed model performance using **ROC curves, precision, recall, and F1-score** to evaluate predictive performance and reliability.

MRI Safety in Pacemakers *Academic Research Research Methodology*

- Conducted systematic literature analysis to **collect, organize, filter, and evaluate research data** using structured research methodologies.
- Applied **PRISMA frameworks and Newcastle-Ottawa scales** to systematically assess medical literature and experimental research quality.

CERTIFICATIONS

- **Applied Machine Learning in Python** – University of Michigan, Coursera (2025)
- **Current Drug Regulatory Requirements for Clinical Trials** – NPTEL (2025)
- **Blockchain and its Applications** – NPTEL (2025)
- **Fundamentals of AI and ML / Python Essentials** – Vityarthi (2024)
